From simulation to track testing
“Translating experimental test setups between different software platforms causes unnecessary costs and errors”
Automotive test equipment

- Robotic test systems (>1000 in use globally)
- ADAS platforms (>100 in worldwide use)
- Suspension measurement
One toolchain for both simulation & track testing

Proven AB Dynamics and rFpro software toolchain and test equipment provides consistency in both virtual and real world testing.

Simulation racks → Dil simulators → Proving ground → Public road testing
DiL simulators running AB Dynamics & rFpro software

Reliable

Robust

Leading motion platform performance

Cost effective

Low maintenance
Our aVDS DiL simulator in operation
